United States Patent and Trademark Office

Examiner: Lam, T.

Art Unit: 2834

In re:

Applicant: BLAHAK, A., et al

Serial No.: 10/018,185

Filed: March 15, 2002

AMENDMENT

March 3, 2003

Hon. Commissioner of
Patents and Trademarks
Washington, D.C. 20231

Sirs:

Responsive to the Office Action of December 17, 2002, please amend the
application as follows:

FAX RECEIVED

MAR 4 2003

TECHNOLOGY CENTER 2800

Specification as Amended:

On page 8, please replace the abstract of the disclosure with the following:

The invention relates to a rotating electrical machine with a contacting device whose circumference has at least one slide contact disposed on it, which remains in sliding contact with a brush apparatus (slide system), in which the at least one slide contact is comprises of a wear resistant material. The invention provides that the electrical machine has an internal cooling system in which a fluid/gas mixture used as a cooling medium circulates around the components to be cooled, including the slide system, and the at least one slide contact is comprises of an alloy with at least one alloy component that has an affinity for oxygen.
